

"PLASMA - LOW TEMPERATURE STERILIZER"

Hospital & Laboratory Application

"THE CISA GROUP COMPANY"

COMPANY PROFILE

CISA has been manufacturing and selling sterilization systems for over 60 years for both hospitals and industrial applications for all sterilization needs.

CISA is an Industrial Group which manufactures hospital and industrial machinery having integrated technological production systems with factories in different continents and its headquarters in Lucca, Italy.

Distributor coordination and technical service centres are managed through CISA branches, located in Joinville (Brazil) for Brazil and Latin America, in Amman (Jordan) for Middle East area, and Singapore for Asia,

as well as distributors and sales offices worldwide to ensure a constant presence and complete service in all countries in which CISA operates.

CISA takes part in a very important field, **sterilization**, that is in continuous development. For this reason it has focused its activity on a line of products that includes: infection control solutions, machinery for washing and disinfecting, machinery for high and low temperature sterilization, software systems for management control and medical waste treatments. All the products in the different lines are "made in CISA" from design to manufacture.

Gabriele Pacini CEO Cisa - Infection Control System

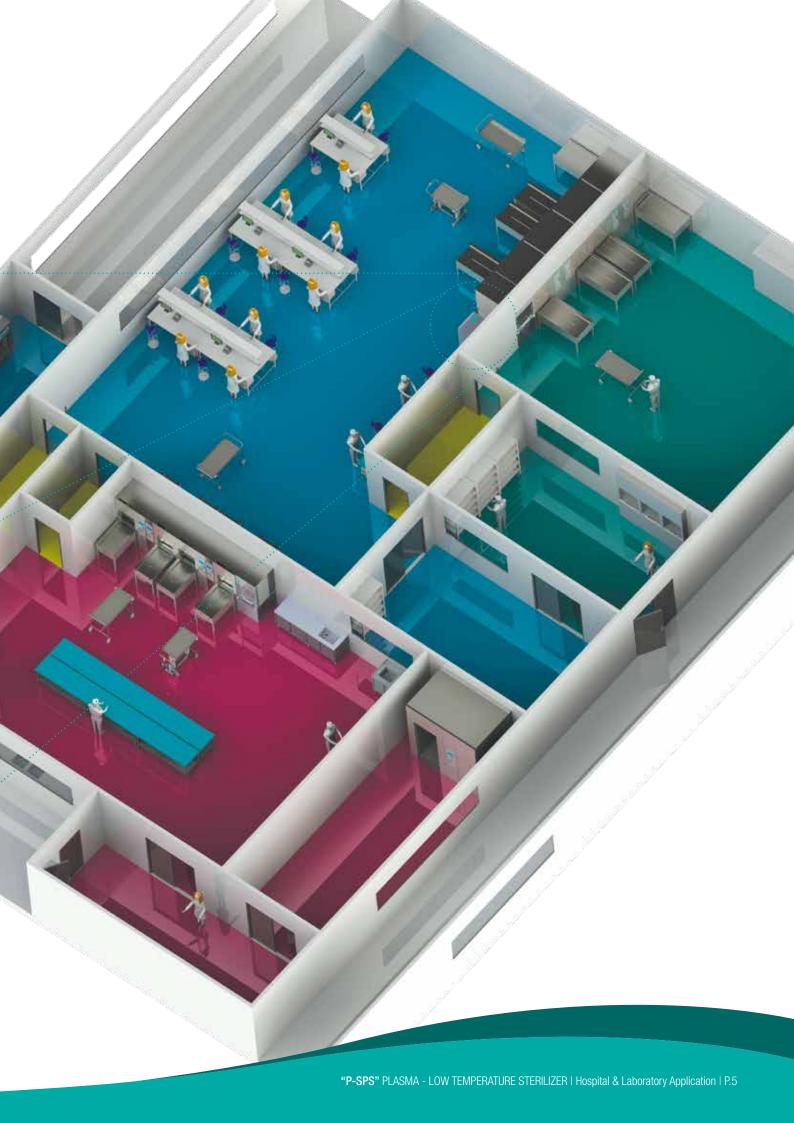

"WITHIN THE CSSD"

WHERE YOU CAN FIND ME

The Sterile Processing Department (Central Supply, or Sterile Supply as it is also known), comprises that service within the hospital in which medical/surgical supplies and equipment, both sterile and nonsterile, are cleaned, prepared, processed, stored, and issued for patient care.

The Plasma Low Temperature Sterilizer CISA (as shown on the legend) according the regulations of the CSSD is installed in the clean area with pass through access of the sterile area.

"MODEL P-420 SPS EASY"

HOW IT WORKS

The plasma machine operates based on sterilisation with hydrogen peroxide. Peroxide has a high oxidising effect, when it enters into the sterilisation chamber in vacuum conditions and in the presence of an electromagnetic field, it reforms into free radicals, spreading over the instrument surfaces. These active radicals kill bacteria and micro-organisms, even at low temperatures. It is therefore effective on temperature sensitive materials or in any case on instruments which are not resistant to high temperatures. The degree of vacuum reached by the machine also allows removing any remaining peroxide residuals at the end of the sterilisation, which would otherwise remain on the instruments.

ADVANTAGES OF THE PLASMA METHOD

The Plasma series offers optimal sterilisation results for a wide range of medical devices.

- Low temperature sterilisation (45-50 °C)
- Improved penetration and efficiency
- Improved heat distribution
- No toxic residue
- Full and safe sterilisation
- Lower operating costs
- Lower maintenance costs
- Designed to be easily moved (on wheels)
- High sterilisation flexibility
- Colour touch screen to monitor parameters
- Integrated incubator for microbiological tests
- Multi shot hydrogen peroxide cartridges

"APPLICATIONS" LOW HUMIDITY RATE

CISA SPS EASY can sterilise metal and non-metal instruments such as stainless steel, aluminium, bronze, titanium, glass, various type of plastic and resins, woven and non-woven fabrics.

The only precaution to be observed must be that the objects inserted inside the chamber should have a low humidity rate, i.e. be perfectly dry.

"INTEGRATED MICROBIOLOGICAL INCUBATOR"

INTEGRATED TESTER

The destruction of micro-organisms is the result of the oxidising action of peroxide. The Plasma steriliser is a conventional release machine, therefore it is necessary to validate each sterilisation with a microbiological indicator. For this reason, the machine has an integrated microbiological tester which allows certifying the reduction of the bacterial load and the achievement of sterility.

"CYCLES & PROCESSES" HYDROGEN PEROXIDE INJECTION

The materials to be sterilised are packaged and placed on the shelf in the chamber. Once loaded, the first phase consists of the vacuum generation, during which the plasma is activated; this generates a movement of ions within an electromagnetic field. Thanks to this first process, the chamber reaches an optimum temperature of about 45 degrees, which allows facilitating the action of the hydrogen peroxide.

According to the type of material, such hydrogen peroxide injection process inside the chamber can occur once (flat materials) or twice (hollow bodies).

At the end of the sterilisation process, thanks to the high vacuum pump, it is possible to perform vacuum/air washes in order to completely clean the objects from any peroxide residue

"CONTROL PANEL" CONTROL SYSTEM

The CISA SPS EASY apparatus adopts a control system via a colour LCD touch screen display.

The built-in biological incubator enables the operator to position the microbiological sample directly on site, without having to use any additional equipment. The printer allows you to reproduce on paper the parameters and the outcome of the sterilisation process.

"CHAMBER" GOOD HEAT CONDUCTIVITY

The Plasma model is equipped with a sterilisation chamber made entirely of aluminium, with good heat conductivity.

The rectangular design of the sterilisation chamber ensures a high load ratio, in respect of the overall dimensions of the machine. The machine is available in 100, 150 or 200 litre versions, with one or two doors.

"CONTAINERS" ACCESSORIES

A wide range of optimally designed accessories is available in order to load the instruments inside the machine easily.

"CARTRIDGE" 12 HYDROGEN CAPSULES

The CISA SPS EASY series uses cartridges containing 12 hydrogen capsules each. Each capsule contains 2 ml of 58% hydrogen peroxide. According to the type of material loaded inside the chamber, each cartridge will always ensure a number of sterilisation cycles ranging between 6 and 12.

"QUALITY & SAFETY" OUR CERTIFICATES

The Plasma SPS Easy meets the requirements of 93/42 / EEC, after 2007/47 / EC and the requirements of EN ISO 14937: 2009. Complies with the directives 2004/108 / EC (EMC) and 2006/95 / EC (LVD). It also complies with the product standards CE EN 61010-1:2013, IEC 61010-2040: 2005, IEC 60204-1: 2010, EN 61326-1: 2013 and IEC 60601-1-2: 2001.
